Construction - MEICA Project Engineer

Application Details

In order to work in Ireland a non-EEA National, unless they are exempted, must hold a valid employment permit. Please review the [Eligibility and requirements for an employment permit](#) if you are unsure of your eligibility to apply for this vacancy.

Job Description

You will work as part of our multi-disciplinary engineering team to bring water and wastewater projects from initial design, through to completion and handover to the client. You will have the opportunity to work alongside, and collaborate with, industry-leading project teams, working in a one-team culture while broadening your own skill set.

As a MEICA Project Engineer you will be expected to support the project manager and contracts manager in the daily operation and delivery of projects as well as showing progression and development in your own career. You will primarily be involved in Mechanical, Electrical, Instrumentation, Control and Automation (MEICA) installation work however due to the nature of the works completed by Glanua you will also have an opportunity to witness civil/building engineering works as well as process design, commissioning and operations. This will present a wide multi-disciplinary engineering knowledge base and an opportunity to progress your career.

Glanua is a progressive company that always seeks to develop its employees. When you demonstrate aptitude and interest in furthering your career within the organisation, training and promotion will always be available to you.

Main Duties and Responsibilities:

The main duties and responsibilities of the MEICA Project Engineer are outlined as follows:

Work as part of a team in the delivery of one or more projects at any one time, embracing the ethos of a "one team" culture.

Ensure Health, Safety, Environmental & Sustainability standards, policies and procedures are always adhered to on-site.

Be familiar with the HSQE management system and procedures in conjunction with the current statutory requirements

Be available and willing to provide coverage should the project manager be absent for any reason, assuming the role of managing the day-to-day operation of the site

Need to be familiar with programme and budgets for the project, fully understanding the impact any overruns shall have on the project

Review, prepare and submit detailed Method Statements and Risk Assessments prior to work activities commencing.

Ensure project is delivered in-line with quality procedures and that all Factory Acceptance testing (FAT), site acceptance testing (SAT), inspection and test records (ITRs), pipe pressure testing, hydrostatic tank testing and commissioning of the works are completed in-line with the quality plan and Employer's Requirements.

Preparation and submission of project handover files including O&M Manuals, Safety Files and As Constructed Drawings.

Ensuring design, materials and workmanship is in line with the specified requirements

Engage with supplier and sub-contract chain to select vendors for project delivery. Provide recommendations on equipment selection as part of the design and procurement process and utilise procurement software to ensure materials and subcontracts are ordered/ awarded as and when required.
