Finance Automation & GenAI Architects

Application Details

In order to work in Ireland a non-EEA National, unless they are exempted, must hold a valid employment permit. Please review the [Eligibility and requirements for an employment permit](#) if you are unsure of your eligibility to apply for this vacancy.

Job Description

Role Overview

We're looking for minds that see inefficiency as raw material and automation as a craft. You design systems that scale without friction and instinctively ask: What can be automated? What can be accelerated? What can be reimaged entirely? If you can translate business problems into technical blueprints, engineer solutions that reduce human drag, and lift an organization's capability through automation + GenAI, this is your inflection point. We need architects of intelligence, not just builders of code.

Key Responsibilities

- Take real finance friction and turn it into working systems
- Design and build data systems that organize raw inputs into usable, reliable structures
- Raise data quality to "decision-grade" through validation, reconciliation, and controls
- Create measurable efficiency in finance processes through automation and workflow redesign
- Prototype fast (Python / R / SQL); productionize what works with sound engineering practices
- Build and deploy GenAI solutions, including agentic workflows, with a pragmatic ROI focus
- Deliver automation in the real world: RPA (UiPath or equivalent) plus the broader stack (ETL/ELT, workflow, APIs)
- Drive delivery across stakeholders, locations, and timelines; land adoption and change
- Document clearly and leave reusable assets: pipelines, components, templates, and runbooks

Qualifications and Experience

- 3+ years in finance technology/analytics/automation or consulting preferred
- Bachelor's degree in Engineering/Information Systems/Finance/Statistics
- Strong data fundamentals (databases, modeling, and Excel); comfortable with messy, heterogenous datasets
- Hands-on with Python or R; strong SQL preferred
- Proven delivery with RPA platforms (UiPath or equivalent), beyond curiosity or POCs

Experience implementing or integrating BI/ETL/workflow tools; familiarity with cloud data stacks a plus

Demonstrated work with GenAI (incl. agentic solutions): experiment → evaluate → deploy with safeguards

Preferred Skills

Structured thinker with strong judgment; low-ego operator who ships, iterates, and improves, fast

Systems thinker: anticipates failure modes and tightens seams before they split

Security- and control-aware by default; designs with auditability and resilience in mind

Clear, executive-ready communication, able to translate technical choices into business impact

Stakeholder leadership across Finance, Operations, Data, and Engineering; drives outcomes to closure

Documentation discipline and change management mindset to ensure durable adoption

- **Sector:** financial and insurance activities

Career Level

- Entry Level

Candidate Requirements

(Essential)

- **Minimum Experienced Required (Years):** 0
- **Minimum Qualification:** Level 8 (incl Higher Diploma & Honours Bachelor Degree)

(Desirable)

- **Ability Skills:** Computer Literacy, Technical IT
- **Competency Skills:** Collaboration, Problem Solving, Teamwork
- **Specialising In:** sql;python;uipath;azure openai;agenticai
