AI & Automation Engineer

Application Details

In order to work in Ireland a non-EEA National, unless they are exempted, must hold a valid employment permit.Please review the Eligibility and requirements for an employment permit if you are unsure of your eligibility to apply for this vacancy.

Job Description

Key Responsibilities

Identify opportunities across the business where AI and automation can improve efficiency and reduce manual work.

Analyse operational workflows and design practical automation solutions.

Build and deploy AI-driven tools using modern AI platforms and APIs.

Develop automation systems that improve operational efficiency and internal productivity.

Rapidly prototype and iterate on solutions based on feedback and performance.

Support the CEO and CTO in executing Elios AI adoption roadmap.

Research emerging AI tools and technologies that could benefit the business.

Work with teams to implement and adopt AI tools effectively.

Example Projects

Building AI-driven scheduling and routing tools for field installation teams.

Developing automation systems to reduce manual operational processes.

Creating AI-powered internal assistants to help teams access operational data and insights.

Implementing automated reporting and data analysis tools to support decision making.

Designing systems to improve customer communication and service processes through AI.

Essential Skills & Experience

2–5+ years of experience in software development, automation, or technical product development.

Experience building AI-powered tools, automations, or integrations.

Familiarity with LLM APIs such as OpenAI or Anthropic.

Experience with automation tools or workflow platforms (Zapier, Make, n8n or similar).

Ability to build solutions using Python, JavaScript, or similar scripting languages.

Experience connecting APIs and data sources.

Strong problem-solving skills and ability to translate business needs into technical solutions.

Comfortable working independently and taking ownership of projects.

Desirable Experience

Experience building internal tools or operational automation systems.

Experience working in startups or fast-growing companies.

Experience integrating AI into operational or business systems.

Familiarity with data analysis and operational performance metrics.

- **Sector:** information and communication
