In order to work in Ireland a non-EEA National, unless they are exempted, must hold a valid employment permit. Please review the [Eligibility and requirements for an employment permit](#) if you are unsure of your eligibility to apply for this vacancy.

Job Description

We are seeking an experienced Toolmaker to join our Toolroom team at our Longford manufacturing facility. The successful candidate will be responsible for the manufacture, maintenance, and repair of injection moulds supporting a high-volume, technically demanding manufacturing environment.

Key Requirements:

Time served with a toolmaker producing injection mold.

Previous experience in an injection mold making / mold maintenance environment.

knowledge of milling, turning, grinding, sparking and fitting.

Ability to weld.

Good knowledge in mold maintenance and experience of supporting a high-volume manufacturing environment.

Previous experience in the manufacture and/or repair/maintenance of the following mold types would be a distinct advantage.

Hot Runner molds.

Valve gated molds.

Good understanding of the injection molding process

Key Responsibilities:

Examine drawings and specifications to determine appropriate methods and sequences of operations

Mark out reference points using measuring instruments and tools such as punches, rules, and squares

Operate hand and machine tools to shape workpieces to specifications and check machining accuracy

Assemble prepared parts, check alignment using micrometres, optical projectors, and other measuring equipment, and adjust as necessary

Repair damaged or worn tools

Responsible for the maintenance of all injection moulds within the company, ensuring they are maintained to standard specifications

Compile and maintain standard specifications and procedures for each mould

Monitor all existing moulds to ensure conformance to established standards

Work closely with Process Engineers to troubleshoot mould-related issues

Support a high-volume manufacturing environment

In conjunction with approved toolmakers, research, develop, and implement new processes or systems for mould manufacture and maintenance under the direction of the Toolroom Manager

Review systems regularly with Process Engineers, Group Leaders, and the Quality Department to ensure ongoing compliance

Perform additional duties as requested by the Toolroom Manager.
