Graduate Logistical Data and Business Analyst

Application Details

In order to work in Ireland a non-EEA National, unless they are exempted, must hold a valid employment permit. Please review the [Eligibility and requirements for an employment permit](#) if you are unsure of your eligibility to apply for this vacancy.

Job Description

The Graduate Logistical Data and Business Analyst supports the evaluation, optimization, and data-driven analysis of logistical workflows, operational procedures, and supply chain projects. This role focuses on analyzing operational department performance, conducting work-method studies, establishing project timelines, and supporting contractual/service arrangements to enhance business efficiency and lower operational costs

Key Responsibilities

- Studies particular department or problem area and assesses its interrelationships with other activities
- Studies work methods and procedures by measuring work involved and computing standard times for specified activities, and produces report detailing suggestions for increasing efficiency and lowering costs
- Analyses project components, organises them into a logical sequence and establishes the minimum time required for the project
- Analyze existing work methods and procedures by measuring task volumes and computing standard cycle times for logistics operations
- Purchases services, receives payment from clients, processes contracts and deals with contractual arrangements
- Study specific logistics and operational departments or problem areas, evaluating their interrelationships with cross-functional supply chain activities
- Prepare operational reports detailing recommendations to streamline workflows, eliminate bottlenecks, increase throughput efficiency, and lower overall operational costs
- Model project workflows to establish minimum required timelines, critical paths, and resource needs for operational deployments
- Develop and update dashboards (using PowerBI, Excel, or SharePoint) to track operational KPIs against project milestones
- Liaise with clients, service providers, and internal stakeholders to maintain aligned communication and smooth service execution

Required Skills & Competencies

- Strong quantitative and problem-solving mindset.
- Ability to structure project schedules, organize component tasks, and track performance metrics
- Strong knowledge of operations management, logistics coordination, and supply chain processes
- Experience working with ERP and warehouse management systems (SAP, Oracle NetSuite, or similar). Navision and BC experience an advantage
- Understanding of batch and serial-controlled inventory environments. Medical and MDR regulations require strong attention to detail
- Strong analytical and problem-solving skills with the ability to investigate operational issues
- High level of accuracy and attention to detail in a regulated environment
- Experience using data and reporting tools to support operational decision-making
- Strong communicator and proven ability to manage cross functionally.

Experience & Qualifications

- A Bachelor's Degree in Business Law, Supply Chain, or a related field is highly valued.
- Previous experience with Data analytics, ERP Systems and modern automations
- Previous experience in data driven supply chain, logistics, inventory control
- **Sector:** transportation and storage

Career Level

- Entry Level
