Electrical Maintenance Technician

Application Details

In order to work in Ireland a non-EEA National, unless they are exempted, must hold a valid employment permit. Please review the [Eligibility and requirements for an employment permit](#) if you are unsure of your eligibility to apply for this vacancy.

Job Description

Electrical Maintenance Technician – Automation & Injection Moulding

Are you the type of person who enjoys figuring out why a machine stopped working before everyone else even notices? Do you love fault finding, automation, robotics, and keeping production running smoothly? If so, we want to hear from you.

We're looking for a hands-on Electrical Maintenance Technician to join our manufacturing team and help keep our automated production equipment performing at its best. You'll be working with robotics, PLC-controlled systems, injection moulding machines, and a wide range of automated equipment in a fast-paced production environment.

This is an excellent opportunity for a skilled Technician with strong electrical, automation, PLC, and robotics experience.

No two days are the same — one minute you could be troubleshooting a PLC fault, the next improving a robotic system or helping install new equipment.

What You'll Be Doing

Carrying out preventative and reactive maintenance on automated machinery and production equipment

Diagnosing and fixing electrical, PLC, robotic, pneumatic, hydraulic, and mechanical faults

Troubleshooting PLC systems and automated production lines

Working with robotics and automated handling systems to keep everything running smoothly

Responding quickly to breakdowns and getting production back up and running fast

Supporting machine upgrades, improvements, and new equipment installations

Reading electrical schematics, technical drawings, and PLC logic

Maintaining maintenance records and updating work orders through our Mainti4 system

Supporting continuous improvement projects and helping us reduce downtime

Working closely with production and engineering teams to solve problems and improve performance

Keeping things safe, organised, and running efficiently

What We're Looking For

Previous experience in a Maintenance Technician role within manufacturing or industry

Strong electrical fault-finding skills

Good PLC troubleshooting experience

Experience working with automation and robotics

Injection moulding experience would be a big advantage

Knowledge of:

Electrical systems

PLCs

Robotics & automation

Pneumatics & hydraulics

Mechanical systems

Ability to read electrical drawings and technical documentation

Someone practical, proactive, and calm under pressure

A team player with good communication skills and a problem-solving mindset

Why Join Us?

Work with modern automation, robotics, and advanced manufacturing equipment

Get involved in continuous improvement projects and machinery upgrades

Build your technical skills in a highly automated environment

Join a supportive and experienced team

Opportunities for development and progression

If you enjoy fault finding, solving technical problems, and keeping machines doing what they're supposed to do — we'd love to hear from you.

Working hours: 40 hours per week, shift rotation, site located in Greystones Ireland. This is an on-site role.

- **Sector:** manufacturing
